The 15000 series barcode verifiers are designed to read both linear and two-dimensional matrix barcodes simultaneously. All the symbols seen in their field of view are verified individually in accordance with the appropriate ISO/IEC standards.

The verifiers are designed to be used in three different positions so that even barcodes on awkwardly shaped objects can be easily read. They are powered solely via their USB connection to a PC or laptop, and the software runs on any Microsoft supported version of Windows.
